

TOXMOD

VOICE CHAT MODERATION THAT PROTECTS YOUR PLAYERS

ToxMod is the only proactive, voice-native moderation solution for games, enabling studio to uncover toxicity, moderate voice chat effectively, and build positive experiences for players.

REDUCE PLAYER CHURN

- Identify and address up to 100x more nefarious behavior than player reports, which miss unreported activity like radicalization or child predation
- Prevent ~7-10% monthly churn resulting from severe voice chat toxicity

EMPOWER YOUR MODERATORS

- Prioritize the worst harms in-game, empowering your moderators to be 10x more productive
- Autonomously moderate bad behavior based on your preferences, enabling moderators to do more meaningful work

BOOST REVENUE

- Enable full coverage visibility across all in-game voice chat at a fraction of the cost of legacy tools
- Integrate ToxMod in less than a day, regardless of your VoIP or engine infrastructure

Modulate takes data privacy seriously: we are ISO 27001 certified and compliant with GDPR, COPPA, and CCPA.

TOXMOD FEATURES:

- Multi-lingual support for 18 languages
- Extremist language detection
- Multi-platform support
- Player risk scoring
- Player report correlation
- Proximity chat compatibility
- Enterprise-grade customer service

HOW IT WORKS:

1. **TRIAGE** voice chat data to determine which conversations warrant analysis

2. **ANALYZE** the tone, context, and perceived intention of those filtered conversations

3. **ESCALATE** harms and toxicity directly to moderators to mitigate bad behavior in real-time
